

MALODOUR (HALITOSIS)

Please read this information sheet. If you have any questions, particularly about the treatment or potential side-effects, please ask your doctor.

- This is common
- Malodour is common on awakening
- Malodour is often far more obvious to the sufferer than others
- If real it is usually caused by diet, habits, dental plaque or oral disease
- It can be measured with a halimeter
- It often significantly improves with oral hygiene
- Malodour can sometimes be caused by sinus, nose or throat conditions
- It is *rarely* caused by more serious disease

A patient has the right under common law to give or withhold consent to medical examination of treatment. This is one of the basic principles of health care. Patients are entitled to receive sufficient information in a way they can understand about the proposed treatments, the possible alternatives and any substantial risk or risks which may be special in kind or magnitude or special to the patient, so that they can make a balanced judgement.
